Excerpt from Memoirs of the Geological Survey: England and Wales; The Geology of the Country North-East of York and South of Malton; (Explanation of Quarter-Sheet 93 N. E.); (New Series, Sheet 63;) The sheet of the Geological Survey Map, of which the following pages contain a description, embraces a large part of the Vale of York, with a portion of the Jurassic and Cretaceous uplands to the east and north-east. One of the most interesting geological features which it illustrates is the remarkable overlap of the Chalk, which to the north may be observed lying on the Kimeridge Clay, whence it steals across the underlying formations until, in the south, it rests on the Lower Lias. Although there is an actual southward thinning of the Lower Oolites and Upper and Middle Lias, this structure is mainly the result of denudation, the Jurassic rocks having been greatly disturbed, faulted and denuded, before the Chalk was laid down upon them. The edition of the Map on which the superficial deposits are coloured, shows well at a glance the characteristic...
